/dev stage="windle brain"
/dobe="windle brain"
/dobe="loge" | Lab host="windle brain"
/dobe="loge" | Brain; Vector: pyx- Asc; Site 1: EcoR I;
/clone="logen: Brain; Vector: pyx- Asc; Site 1: EcoR I;
Site 2: Not I: The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcose
gel: First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pyx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CAGCCACCAC. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Montal Health (NIMH), Hemin Chin, Ph.D.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a Sequence 2864, Application US/09252991A

Patent No. 6531795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-17

Sequence 1270, Application US/09252991A

Sequence 1270, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARMOINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARMOINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 1270

                                                                                                                                                                                                                                                                                      Sequence 1336, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc. U. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATIN

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: MARBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR PELICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 1336

LENGTH: 2616
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

Nucleotides encoding methylarginase polypeptides, vectors comprising these mucleotides and the polypeptides themselves can be used in medicaments for the treatment of hyperlipidemia, renal failure, hypertension, restenosis after angioplasty, atherosclerosis, complications of heart failure, schizophrenia, multiple sclerosis or cancer. Modulators of the enzyme can be used in medicaments for the treatment of ischemia-repetfusion injury of the brain or heart, cancer, lethal hypertension in severe inflammatory conditions such as septic shock or multi-organ failure, or local and systemic inflammatory disorders including arthritis, skin disorders, inflammatory cardiac disease, migraine, or microbial or bacterial infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       601 ATGCAACAGATGAGTGACCACCGCTACGACAAACTCACTGTGCCTGATGACATAGCAGCA

The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding the CADE71463). DDAHS regulate the metabolism of ADMA (asymmetrical the CADE71463). DDAHS regulate the metabolism of ADMA (asymmetrical dimethyl-arginine) a natuarly occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which has been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non combined hyperlipidaemia, premature coronary artery disease (CAD), non Thr. which is caused by a C to T change in exon 1 at a position or Thr. which is caused by a C to T change in exon 1 at a position or responding to base 260 in ADE71463 and ADE71465, Individuals heterocorresponding cardiovascular diseases and diabetes. The invention also relates to a DDAH 1 cDNA capture probe; a method and kit for diagnosing a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
complications of diabetes and diabetes in an individual by determining the DDAH I genotype, a method of treating diabetes or vascular complications of diabetes by enhanting nittle oxide availability, productions of diabetes and diabetes in a hypertensive treatment of cardiovascular disease and diabetes in a hypertensive batalability, production or concentration; a method of targeting complication or determining the DDAH I genotype and treating them with a drug that affects nitric oxide availability, production or metabolism; and a transgenic animal which carries a human variant DDAH; nucleic acid sequence. The nucleic acid molecules and polypeptides are useful for treating cardiovascular disease (e.g., coromary heart disease, creating cardiovascular disease (e.g., coromary heart disease, creating cardiovascular disease (e.g., coromary heart disease, complications. The methods are useful for determining whether a patient a vailability, production or metabolism; a drug which reduces ADMH availability or concentration; orn an agent which elevates DDAH arailability or concentration; orn an agent which elevates DDAH and also useful for determining whether a patient will be at risk of adverse effects if DDAH antagonists are administered. The present sequence certered also useful for determining the "wild-type" (Thr87) DDAH I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of a number of human shear stress response proteins. These are useful in the diagnosis, treatment and screening of vascular diseases caused by arteriosclerosis, including heart failure, post-PTCA restenosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ACGCGCTGAGAAGCGCCAAGGGCGAGGAGGTGGACGTCGCCCGCGCGCAACGGCAGCACC

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor seem cell differentiation into esteoblasts, or bone tissue deposition; (b) diagnosing abnormal captures, or bone tissue deposition of osteoblast formation or esteoprosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition.

Specific conditions include postmenopausal osteoprosis, glucocorticoid osteoprosis or male osteoprosis, osteopenia, osteodystrophy, drugindeed abnormalities in bone formation or bone loss, conditions that induced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoprosis), skeletal disease linked to breast cancer, mastocytosis, Ranconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cODN marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       442
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  562

Claim 1; SEQ ID NO 103; 458pp + Sequence Listing; English

The invention relates to a secretory polynucleotide (designated sptm) comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

cc the polynucleotide sequence at least 90 % identical to the polynucleotide sequence, a polynucleotide complementary to them or an XNA equivalent of them. The polypeptide or polynucleotide are useful for treating, preventing or diagnosing a disease or condition associated with the expression of functional SPTM. These are particularly useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's disease), neurological disorders (e.g. epilepsy, Huntington's disease, antityle sclerosis, cerebral palsy, Parkinson's disease, anxiety, complete sclerosis, cerebral palsy, Parkinson's disease, anxiety, schizophrenia or annesia), or cell proliferative disorders (e.g. psoriasis, polycythemia vera, or cancers including adenocarcinoma, celukaemia, lymphoma, melanoma, mycloma, sarcoma or cancers of the brain, breast, cervix or prostate). Note: The sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.WiPo.int/pub/published_pot_sequences 622 682 742 142 202 218 278 CATTAGAAAAACTTCAGCTCAATATAGTAGAGATGAAAGATGAAAATGCAACTTTAGATG 382 458 562 98 GCTACGACAAACTCACTGTGCCTGATGACATAGCAGCAAACTGTATATATCTAAATATCC 443 AACGAGGTGCTGAAATCTTGGCTGATACTTTTAAGGACTATGCAGTCTCCACAGTGCCAG ACGAGACCTTCCGGACTGCGTCTTCGTGGACGTGGCCGTGGTGTGCGAGGAGACGG CCCTCATCACCCGACCCGGGCGCCGAGCCGGAGGAAGGAGGTTGACATGAAAGAAG CATTAGAAAAACTTCAGCTCAATATAGTAGAGATGAAAGATGAAATGCAACTTTAGATG GCGGAGATGTTTTATTCACAGGCAGAGAATTTTTGTGGGCCTTTCCAAAAGGACAAATC GCGGAGATGTTTTATTCACAGGCAGAGAATTTTTTGTGGGCCTTTCCAAAAGACAAATC TGGCAGATGGGTTTGCATTTCTGCAGCATGGCTGGCCCTAACCTGATCGCAA CCAACAAAGGGGCACGTCTTGCTGCACCGAACCCCGGAAGGAGTATCCAGAAAGTGCAAAAGG TIATGAGADACTGAAGGACCATATGCTGATCCCCGTGAGCATGTCTGAACTGGAAAAGG ACGCGCTGAGAAGGCCCAAGGCGAGGAGGTGGACGTCGCCCCGCGCGGAACGGCAGCACC Sequence 3932 BP; 1089 A; 883 C; 775 G; 1185 T; 0 U; 0 Other; Query Match 90.0%; Score 772; DB 7; Length 3932; Best Local Similarity 99.9%; Pred. The invention relates to an isolated polypeptide comprising 12 fully defined sequences of 81-615 amino acids given in the specification; a naturally occurring amino acid sequence at least 90% identical to, having 81-599 amino acids, at least 93% identical to a sequence of 529 amino acids, or at least 97% identical to a sequence of 615 amino acids, or about in the specification; or a biologically active or immunogenic fragment of the polypeptide. The polypeptides and polymucleotides are
                                                                                                                                                                                                                                                                                                           Anti-HIV; antiarteriosclerotic; dermatological; cytostatic; thyromimetic; osteopathic; thrombolytic; ophthalmological; antilipaemic; hepatchropic; antidiarthoeic; antilifalmamatory; virucide; immunogenic; autoimmune; drug metabolising enzyme; DME; inflammatory; AIDS; atherosclerosis; contact dermatitis; cell-proliferative; cancer; cirrhosis; dwarfism; developmental; hypothyroidism; endocrine; osteoporosis; thrombosis; diabetes; glaucoma; keratitis; metabolic; hyperlipidaemia; diarrhoea; cystic fibrosis; gastrointeefinal; gastroenteritis; liver; hepatitis; Reye's syndrome; exogenous compound; gene therapy; enzyme; human; gene;

useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of a drug metabolising enzyme (DME), such as autoimmunate/inflammatory (e.g. AIDS, atheroscierosis, contact dermatitis) cell-proliferative (e.g. cancer, cirrhosis), developmental (e.g. dwarfism, hypothyroidism), endocrine (e.g. osteoporosis, thrombosis, diabetes), eye (e.g. glaucoma, cartitis), metabolic (e.g. hyperlipidaemia, cystic fibrosis), gastrointestinal (e.g. gastroenteritis, diarrhoea), or liver (e.g. hepatitis, Reye's syndrome) disorders. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The DME or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-compounds that specifically bind to or modulate the activity of the profiles. The polynucleotides of the invention can be used in gene therapy. This polynucleotides equence represents the DNA encoding a drug compoulising enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1109

ï

The invention relates to a variant dimethylarginine dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADP71464) and a nucleic acid encoding it (ADP71463). DDAH8 regulate the metabolism of ADMA (asymmetrical dimethyl-arginine; a natuarily occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chronosome 1, which has been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (GAD), non insulin-dependent (types.2) diabetes mellitus, and diseatolic hypertension. The variant DDAH 1 of the invention has Met at position 87, rather than Thr, which is caused by a C to T change in exon 1 at a position

corresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorhomogygous for the Thr87Met allele have an increased risk of developing cardiovascular diseases and diabetes. The invention also relates to a DDAH i genotype, a method and kit for diagnosing a susceptibility to a cardiovascular disease and diabetes in an individual by determining the DDAH i genotype, a method of treating diabetes or vascular complications of diabetes by enhacing nitric oxide availability, production or concentration; a method of targeting to transfer and diabetes in a hypertensive patient by determining the DDAH i genotype and treating them with a drug that affects nitric oxide availability, production or metabolism; and attented and male with a drug transgenic animal which carries a human variant DDAH incleic acid sequence. The mucleic acid molecules and polypeptides are useful for treating cardiovascular disease (e.g., coronary heart disease, and its vascular complications. The methods are useful for determining whether a patient will benefit from treatment with a drug which affects nitric oxide availability or concentration; orn an agent which elevates DDAH availability or concentration; orn an agent which elevates DDAH availability or concentration; orn an agent which elevates DDAH availability or concentration (such as DDAH agonist). The methods are reflects if DDAH antagonists are administered. The present sequence represents a specifically claimed nucleic acid encoding the variant (MEE87) DDAH i.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 262
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      442

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAFISS66 to AAFI6505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polymucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or research purposes. The processes ancigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, remal, and proliferative disorders, wounds, and infectious diseases. ARF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                        Human prostate cancer antigen nucleotide sequence SEQ ID NO:512.

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition; (b) diagnosing abnormal costeoplasts, or bone tissue abnormal rate of osteoplast formation or osteoporosis, or controling the progression of bone tissue deposition. Corted in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postumenousal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteoponia, osteodystrophy, druginduced abnormalities in bone formation or bone loss, conditions that invoced abnormalities in bone formation or bone loss, conditions that invoced abnormalities in bone formation or bone loss, conditions that or invoced disease linked to breast cancer, mastecoytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cONN marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO to the print of the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a combination comprising a number of cDNAs detecting differential expression of one or more cDNAs in a sample containing differential expression of one or more cDNAs in a sample containing nucleic acids by hybridising a substrate with the mucleic acids by hybridisation as experts with the mucleic acids, thus forming one or more hybridisation complexes, detecting hybridisation complexes, detecting hybridisation complexes, detecting complexes formation and comparing the complexes formed with standard complexes, where differences between the standard and the sample complex formation indicate differencial expression of cDNAs in the sample. The differential expression is diagnostic of prostate cancer. The invention also relates to proteans and antibodies related to the cDNAs. The combination is useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. The antibodies are useful for detecting prostate cancer. The antibodies are useful for detecting prostate cancer. This sequence represents a human prostate cancer cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  320

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM

WPI; 2001-541565/60.

Nucleic acids encoding 1224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure, SEQ ID NO 6973; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB18678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune of disorders e.g. Addison's diasease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative colitis; (C) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pot_sequences

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      302 AGGTTGACATGATGAAAGAAGCATTAGAAAACTTCAGCTCAATATAGTAGAGATGAAAG 361
                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptom comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcription unit of the genome, which encodes one or more messenger RNAs splice variants. The colligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or cuantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini collibraries to detect transcripts of a sub-transcriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular collibraries to detect transcripts of a sub-transcriptome only expressed in specific genes; and to detect RNA transcriptom of evectors biological or pathological state, and so allowing the detection of tissue compensual specific genes; and to detect RNA transcripts of a sub-transcriptom on an aparticular disorder. ABN27253 to ABNS9589 represent oligonucleotide sequences from the printed specification, but was obtained in electronic format grace the printed specification, but was obtained in electronic format directly from WIPO at ftpp.WiDo.int/Dublished_pot_sequences

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatocoxicity, of a test or unknown compound. The markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention. 6.3%; Score 54; DB 9; Length 3008; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                             US-09-889-733B-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-9-81-4464-11.

Sequence 11, Application US/09817464

Patent No. 6515107

GENERAL INFORMATION:

APPLICANT: Flor, Peter J.

APPLICANT: Kuhn, Ranier

APPLICANT: Lindaur, Kristen

APPLICANT: Lindaur, Kristen

APPLICANT: Lindaur, Kristen

APPLICANT: Lindaur, Kristen

APPLICANT: Lindaur, Kristen

APPLICANT: Wongfel, Thomas

TITLE OF INVENTION: HURG, HUR7) and Related DNA Compounds

FILE REFERENCE: 4-19679/A/PCT

CURRENT APPLICATION NUMBER: US/09/817,464

CURRENT FILING DATE: 2001-03-26

EARLIER APPLICATION NUMBER: EPO 9416553.7

EARLIER FILING DATE: 1994-08-19

EARLIER FILING DATE: 1994-08-19

EARLIER FILING DATE: 1993-09-20

NUMBER OF SEQ ID NOS: 26

SOFTWARE PLENTING DATE: 1933-09-20

NUMBER OF SEQ ID NOS: 26

SEQ ID NO 11

LENTING DATE: 1933-09-20
